MANOJ P BHAT

Aspiring Software Engineer | Java • Spring Boot • Data Structures & Algorithms

Bengaluru, Karnataka, India | +91 6363679403 | manojbhat489@gmail.com

LinkedIn | **GitHub** | **LeetCode** | **TakeUForward** | **HackerRank**

PROFESSIONAL SUMMARY

MCA student with a CGPA of 8.65 and a foundation in Java, object-oriented programming, and data structures and algorithms. Developing software applications using Java, Spring Boot, MySQL, and React, with project experience in code analysis and machine learning-based transformer failure prediction. Interested in building reliable backend services and practical software solutions.

EDUCATION

Master of Computer Applications (MCA) – SJB Institute of Technology (VTU), Bengaluru | CGPA: 8.65 **2025 – Present (3rd Sem)**

Bachelor of Computer Applications (BCA) – Srinivas University **Graduated: 2025**

Software Development & Web Design | CGPA:8.12

TECHNICAL SKILLS

Languages: Java, Python, SQL

Backend & Frameworks: Spring Core, Spring Boot, JDBC, Maven

Frontend: HTML5, CSS3, React, JavaScript,

Databases : MySQL

Developer Tools: Git, GitHub, IntelliJ IDEA, Visual Studio Code

AI & Machine Learning: AdaBoost, Prompt Engineering, Generative AI Agents

Core Competencies: Data Structures & Algorithms, Operating System , OOP, Computer Networking, Problem Solving

PROJECTS

IntelliFlow – AI Code Review & Learning Platform(Building Phase) **Full-Stack Project**

Technologies: Java,React, Spring Core,Spring Boot, MySQL

- Building a full-stack web application that reviews Java, Python and C++ code and returns estimated time and space complexity, detected DSA patterns (binary search, two pointers, sliding window, hashing, recursion), issues, suggestions and a score.
- Designed a modular Spring Boot back end using Strategy and Template Method patterns (one common Language Analyzer interface, three analyzers) a new language needs only one new class.

Transformer Failure Prediction Using AdaBoost **Academic Project**

Technologies: Python, AdaBoost, Flask, Machine Learning

- Developed an AdaBoost-based classification model using a combination of real-world and synthetic transformer data to predict distribution transformer failure conditions.
- Processed transformer operating parameters and relevant features to prepare the dataset for model training and identify patterns associated with potential failures.
- Implemented AdaBoost's sequential ensemble learning approach, using sample-weight adjustments to improve classification by focusing on previously misclassified observations.
- Evaluated model performance using Accuracy, Precision, Recall and F1-score to assess classification effectiveness.

Library Management System **Full-Stack Project**

Technologies: Java, JDBC, MySQL

- Developed a full-stack library management application to handle book records, issue/return processing, transaction history and user data.
- Designed a relational database schema (MySQL) that replaced manual, paper-based tracking with a centralized digital system.

CERTIFICATIONS

- **HackerRank** – Problem Solving Certification
- **HackerRank** – Java (Basic) Certification

ACHIEVEMENTS & LEADERSHIP

- **Algorithmic Practice:** Consistently solve DSA problems using Striver's A2Z DSA Sheet (TakeUForward) and LeetCode; completed the HackerRank Java Introduction track; active GitHub profile.
- **Leadership:** School Captain (2019–2020); led student initiatives and represented the student body.
